

IMPLX

ERSHARES US LARGE CAP MUTUAL FUND

INVESTMENT STRATEGY> The Fund selects the most entrepreneurial, primarily US Large Cap companies, that meet the thresholds embedded in their proprietary Entrepreneur Factor.

APPROACH> The Entrepreneur Factor incorporates a bottom-up investment orientation, powered by artificial intelligence (“AI”), that stands above other investment factors such as: momentum, sector, growth, value, leverage, market cap (size) and geographic orientation. Moreover, with the aid of AI and Thematic Research, ERShares incorporates a macro-economic, top-down approach that integrates changing investment flows, innovation entry points, sector growth and other characteristics into a dynamic, global perspective model.

	1 YEAR	3 YEAR	5 YEAR	INCEPTION
IMPLX	-33.59%	-1.43%	3.81%	6.06%
S&P 500	-15.47%	8.16%	9.24%	9.66%

Read it carefully before investing. Distributed by Vigilant Distributors, LLC.

The ERShares US Large Cap Fund is exposed to common stock risk. Common stock prices fluctuate based on changes in a company’s financial condition and on overall market and economic conditions. The Fund is also exposed to Manager Risk. The Fund may lose money if the portfolio manager’s investment strategy does not achieve the Fund’s objectives or if the portfolio manager does not implement the strategy properly. Additional risks are detailed in the prospectus. The S&P 500 Total Return Index includes 500 leading companies and captures approximately 80% coverage of available market capitalization. Returns assume the reinvestments of all dividends. The Russell 1000 Growth Index is comprised of large and mid cap US equities that exhibit growth characteristics.

Effective April 1, 2022 the ERShares US Large Cap Fund was renamed the ERShares US Large Cap.

Fees The ERShares US Large Cap Fund mutual fund has institutional class shares. The ERShares U.S. Large Cap Fund has Total Annual Fund Operating Expenses of 0.77%. The Mutual Fund share classes is subject to a Redemption Fee of 2%. *Net Expense ratios reflect the expense waiver and fee reimbursement the advisor has contractually agreed to through November 1, 2022.

In the process of evaluation over 55,000 global public companies for entrepreneurial characteristics, the advisor seeks to exploit state-of-the-art machine learning techniques to develop a more sophisticated assessment of targeted investments. The net result is intended to create an edge in delivering their one-of-a-kind, proprietary, alpha-generating, Entrepreneur Factor.

Entrepreneurs by Sector

Information Technology	42.81%
Health Care	12.57%
Consumer Discretionary	11.65%
Communication Services	10.66%
Financials	4.34%
Industrials	3.86%
Consumer Staples	2.09%
Real Estate	1.39%
Materials	1.27%
Energy	0.31%
Utilities	0.00%

Dr. Shulman's research, developed at Harvard University, has been widely disseminated in leading investment journals around the world and has surpassed independent peer review. This proprietary research, and the portfolio manager's long-standing position as one of the first (if not the first) thematic investment managers (established in 2005), enables them to maintain their leadership status within the community of disruptive, innovative and Entrepreneurial investment strategies.

Companies deemed to meet the threshold of the Entrepreneur Factor, show the potential to experience unique cost efficiencies and demand explosions, through disruptive innovation adjustments in their respective industries. The fund seek to exploit these demand expansions/cost utilizations through its investment methodology applied across a multitude of industrial sectors though historically has concentrated primarily on sectors within Information Technology, HealthCare, Communication Services and Consumer Discretionary. Portfolio constituents include world class entrepreneurs who have the potential to drive disruptive innovation and wealth creation in emerging growth companies. Leadership cohorts often include relatively unknown entrepreneurs who the advisor believe represent the next generation of exceptional global leaders.

Alpha compares the risk-adjusted performance of a portfolio to a benchmark index. A positive alpha means the portfolio has outperformed the index on a risk-adjusted basis. **Beta** is a measure of the volatility of a portfolio in comparison to a benchmark index. Less than one means the portfolio is less volatile than the index, while greater than one indicates more volatility than the index. Standard deviation measures historical volatility. Higher **Standard Deviation** implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance by dividing the portfolio's excess returns (returns above a "risk-free" rate such as a Treasury bill) by the standard deviation of those returns. The higher the ratio, the better the portfolio's return per unit of risk. The **Up Capture** ratio is the statistical measure of an investment manager's performance in up-markets. The **Down Capture** ratio is the statistical measure of an investment manager's performance in down-markets. **Information Ratio** is a ratio of portfolio returns above the returns of a benchmark compared to the volatility of those returns. The **P/E (or Price/Earnings)** ratio is the ratio of a company's share price to its earnings per share. Earnings before interest, tax, depreciation and amortization (**EBITDA**) is a measure of a company's operating performance.
