

IMPAX

ERSHARES US SMALL CAP MUTUAL FUND

INVESTMENT STRATEGY> The Fund selects the most entrepreneurial, primarily US Small Cap companies, that meet the thresholds embedded in their proprietary Entrepreneur Factor.

APPROACH> The Entrepreneur Factor incorporates a bottom-up investment orientation that stands above other investment factors such as momentum, sector, growth, value, leverage, market cap (size) and geographic orientation. Moreover, with the aid of Thematic Research, ERShares incorporates a macro-economic, top-down approach that integrates changing investment flows, innovation entry points, sector growth and other characteristics into a dynamic, global perspective model.

	1 Year	3 Year	5 Year	10 Year	Inception
IMPAX	21.40%	-7.60%	6.41%	7.21%	7.66%

*The ERShares US Small Cap Fund invests in smaller companies, which involve additional risks such as limited liquidity and greater volatility. The Fund is exposed to common stock risk. Common Stock prices fluctuate based on changes in a company's financial condition and on overall market and economic conditions. Additional risks are detailed in the prospectus. The **Russell 2000 Total Return Index** is a subset of the Russell 3000 Total Return Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The **Russell 2000 Growth Index** is composed of small-capitalization US equities that exhibit growth characteristics.*

Fees The ERShares US Small Cap Fund mutual fund has institutional class shares. The ERShares U.S. Small Cap Fund has Total Annual Fund Operating Expenses of 0.87%. The Mutual Fund share classes is subject to a Redemption Fee of 2%. *Net Expense ratios reflect the expense waiver and fee reimbursement the advisor has contractually agreed to through November 1, 2024.

In the process of evaluation over 55,000 global public companies for entrepreneurial characteristics, the advisor seeks to exploit state-of-the-art machine learning techniques to develop a more sophisticated assessment of targeted investments. The net result is intended to create an edge in delivering their one-of-a-kind, proprietary, alpha-generating, Entrepreneur Factor.

Dr. Shulman's research, developed at Harvard University, has been widely disseminated in leading investment journals around the world and has surpassed independent peer review. This proprietary research, and the portfolio manager's long-standing position as one of the first (if not the first) thematic investment managers (established in 2005), enables them to maintain their leadership status within the community of disruptive, innovative and Entrepreneurial investment strategies.

Companies deemed to meet the threshold of the Entrepreneur Factor, show the potential to experience unique cost efficiencies and demand explosions, through disruptive innovation adjustments in their respective industries. The fund seek to exploit these demand expansions/cost utilizations through its investment methodology applied across a multitude of industrial sectors though historically has concentrated primarily on sectors within Information Technology, HealthCare, Communication Services and Consumer Discretionary. Portfolio constituents include world class entrepreneurs who have the potential to drive disruptive innovation and wealth creation in emerging growth companies. Leadership cohorts often include relatively unknown entrepreneurs who the advisor believe represent the next generation of exceptional global leaders.

Alpha compares the risk-adjusted performance of a portfolio to a benchmark index. A positive alpha means the portfolio has outperformed the index on a risk-adjusted basis. **Beta** is a measure of the volatility of a portfolio in comparison to a benchmark index. Less than one means the portfolio is less volatile than the index, while greater than one indicates more volatility than the index. **Standard Deviation** measures historical volatility. Higher **Standard Deviation** implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance by dividing the portfolio's excess returns (returns above a "risk-free" rate such as a Treasury bill) by the standard deviation of those returns. The higher the ratio, the better the portfolio's return per unit of risk. The **Up Capture** ratio is the statistical measure of an investment manager's performance in up-markets. The **Down Capture** ratio is the statistical measure of an investment manager's performance in down-markets. **Information Ratio** is a ratio of portfolio returns above the returns of a benchmark compared to the volatility of those returns. The **P/E (or Price/Earnings)** ratio is the ratio of a company's share price to its earnings per share. **Earnings before interest, tax, depreciation and amortization (EBITDA)** is a measure of a company's operating performance.
